— 8 —

The letter of the C.E(I) Simla may be perused with reference to Note-5. It is reported that the approval of Govt to the recommendations made in the letter dated 11-3-69 (Vide Page) may be communicated

It is further reported that the Standing Technical Advisory Committee of the Central Board of Irrigation & Power has decided that sedimentation surveys of major irrigation Reservoirs required to be repeated after five years. Arrangements were accordingly being made for the sedimentation surveys to be conducted again at Tungabhadra Reservoir. But in the meantime, the Sub-Division during the Floodes was transferred to the control of C.E (I) Simla at the time of Reorganisation of the Dept. Hence it was not possible to start the sedimentation survey work

Please see paras 108 to 117 and 162 to 166 of the notes in Volume I placed below. The letters of the C.E (I)s at Pages 112 to 114 in

WD 01060—G°B—8,00,000 13-12-65

Volume I and that at Serial no 10 in Volume II may please be seen.

The proceedings of the State Technical Advisory Committee (Soil Conservation) meeting held on 6-5-69 have not been received from the CE., Investigation of Projects, yet.

In the meanwhile the CE(I)S States that the Standing Technical Advisory Committee of the Central Board of Irrigation and Power, New Delhi has decided that Sedimentation Surveys of major irrigation reservoirs require to be repeated after 5 years. But, as the Sub-division attending to this work was transferred to the Control of the CE(I)W at the time of re-organisation, the work was not started.

The CE(I)S therefore requests that orders

M. G. S. | Subject: | 5 | File No.

of Government be Communicated on the proposals made by him in his letter at Pages 112 to 114 Cf in Volume I placed below with regard to Conducting Silt and Sedimentation Surveys and Studying back water effects in the Tungabhadra Project.

For orders

14/10

This matter has also been taken up by the T.B. Board — is being dealt with in Rajs Irrg. Secn. The file may be closed.

Sub:- Laying down uniform procedure for conducting Soil Survey in storage reservoir - ~~undertaking~~ undertaking of soil survey work by Mysore Engineering Research Station, Krishnarajasagar - regarding.

Ref:- Government D.O. letter No. PWD 79 GKS 64 dated 19-8-1969.

Sir,

With reference to the above cited letter, I write to state that the approval of Government to the recommendations made in this office letter No. DR/TAD1/TBR/Silt-Survey/4461 dated 11-3-68 may please be communicated.

Further, it is to be stated that the Standing Technical Advisory Committee of the Central Board of Irrigation and Power, New Delhi, has decided that sedimentation surveys of major irrigation reservoirs require to be repeated after 5 years. Arrangement were accordingly being made for the sedimentation surveys to be conducted again at Tungabhadra Reservoir. But in the meanwhile, the Sub-Division doing the studies was transferred to the control of the Chief Engineer, Irrigation (North), Dharwar, at the time of the Re-organisation of the Department. Therefore, it was not possible to start the sedimentation survey work.

2) This office letter No. CEIH/STAC/SC/III/TA3 dated 2-5-69.

--

1 The meeting of the State Technical Advisory Committee (Soil Conservation) was held on 6-5-69. The Chief Conservator of Forests and the Director, Mysore Engineering Research Station, Krishnarajasagar attended the meeting while the Director of Agriculture and the Chief Engineer, Irrigation Projects (South) had sent their representatives. Other members did not attend the meeting. The proceedings of the meeting is being forwarded to Government separately.

2 The subject of planning phased soil conservation measures in the catchment areas of Tungabhadra and other major reservoirs in the State was discussed in detail. It was felt that first of all investigations for the preparation of soil conservation schemes should be undertaken without delay and a master plan prepared. This involves huge amount of work and it was felt that a cell consisting of officers from Public Works Department, Forest and Agriculture would be necessary and that it would not be possible to attend to this office with the existing staff. The committee felt that the Department of Agriculture is the appropriate Department and the Director of Agriculture was therefore requested to forward proposals for setting up such a cell for investigation and preparation of soil conservation schemes in the catchment areas of the following reservoirs :-

Under operation	Under construct
1. Tungabhadra	1. Ghataprabha
2. Krishnarajasagar	2. Malaprabha
3. Kanva	3. Almatti
4. Nugu	4. Narayanapur
	5. Kabini
	6. Honavathi
	7. Harangi

The Director of Agriculture has also been requested to indicate therein the extent of work to be done along with the rough cost of schemes.

Yours faithfully,

CHIEF ENGINEER,
Investigation of HE and IP.

D.O. NO. CEIH STAC SC III TA3

Dear Shri Venkataramu,

Sub:- Laying down uniform procedure for conducting of silt survey in storage reservoirs - undertaking of silt survey work by M.E.R.S. regarding -

Ref:- D.O. letter No. PWD 79 GKS 64 dated 19-11-68.

With reference to ~~your~~ D.O. letter cited above, I write to state that details of the programme of afforestation and contour bunding in the catchment areas of major river valle projects were called for from the Chief Conservator of Forests and the Director of Agriculture for being compiled, discussed in the State Technical Advisory Committee (Soil Conservation) meeting and to evolve a scheme for a phased programme . The information is received from the Director of Agriculture wherea it is still awaited from the Chief Conservator of Forests. As such the meeting of the State Technical Advisory Committee (Soil Conservation) could not be convened. The Chief Conservato of Forests has beem expedited by a D.O. letter.

On receipt of the details from the Chief Conservat of Forests, a meeting of the State Technical Advisory Committ (Soil conservation) will be convened. The scheme to be drawn for phased soil conservation measures in the catchment area of Tungabhadra and other reservoirs will have to be discussed and decided in this meeting and the decisions taken by the committee will be communicated to Governmment.

Yours sincerely,

29.6.66.

As per the studies under basic and fundamental research sponsored by the Central Board of Irrigation and Power, Silt and Sedimentation Surveys in the Tungabhadra Reservoir were taken up by the Mysore Engineering Research Laboratory some time 1962. The Surveys have been completed and the Director of M.E.R.S. has now sent a brief note on sedimentation surveys of Tungabhadra Reservoir, the same may please be seen at Page 73/c.f. Some time in 1962, the Secretary, T.B. Board had asked this Govt. for a copy of the report on the Silt Surveys conducted in Tungabhadra Reservoir. Kindly see the latest letter from the Secretary asking for 3 copies of the report at Page 71/c.f.

Sedimentation of Reservoirs refers to the deposition of all materials transported by flowing waters whether suspended matter or bed load. Sedimentation is the result of erosion. The control or handling of sediment deposits in Reservoirs is a vital part of any reservoir design. Generally while designing the storage capacity for a reservoir a portion of the storage capacity is provided for dead storage It is assumed that the storage available in thi

p.t.c

Reference and markings	Notes and Orders	Para Numbers

region of dead storeage will be filled up by silt and sediment and the life of reservoir is based on the time taken for the deposition of silt in this portion of dead storage capacity.

The lowest silt level in Tungabhadra Reservoir is at 1550. The capacity in the reservoir upto this level is 53611 acre feet. It is this capacity upto 1550 that can be termed as the dead storage available in Tungabhadra Reservoir. It is seen from the present note of the Director, M.P.I.S. that the annual rate silting in Tungabhadra Reservoir is 503.05 acre feet and the silt already accumulated as on the period when these surveys were conducted is 4,10,500 acre feet. The note further mentions that about 45.54 per cent of the dead storage and 13.38 per cent live storage has already silted up. The details as to how these percentages have been arrived at are not mentioned in the note. Further it can be seen that if 45.54 per cent of the dead storage has already silted up in this brief period of about 10 to 15 years. The balance of dead storage available can be expected to be silted up in another 10 to 15 years. This is certainly a very dangerous situation frought with great consequences. It would mean that after the dead storage is filled up the two canals now functioning at the low levels of 1550 + 1560 will cease to function possibly much before the Ayacut has developed. It is not known if the Chief Engineer, Investigation who has forwarded this note of the Director, M.P.I.S. has

Subject:

WD 01050—GPB—8,00,000 13-12-65

examined the report of the Director, M.E.R.S. in this ~~light~~ line, since the detailed calculations as to how the figures mentioned in the note have been arrived at ~~are~~ one not given, the exact implications ~~may not~~ Cannot be analysed.

111) Generally as per the analysis carried out by Dr. Kosla on the Siltation in the various Reservoirs existing, it was laid down by him that the average rate of silting ~~on~~ a reservoir could be taken as 75 ~~acre~~ feet for every 100 Square Miles of Catchment area. In the present case of Tungabhadra Reservoir ~~it is~~ has reported by the Director, M.E.R.S. that this rate of silting is 377.29 acre feet for every 100 Square Miles. This is about five times the average figure ~~worked out~~ by Dr. Kosla in his note on silting up of reservoirs.

112) Apart from this, along with the note on the silt and sedimentation a note ~~to~~ regarding the effect of back waters in different ~~reaches~~ of Tungabhadra Reservoir has also been received from the Director, M.E.R.S. Please see Flag-N of the File. In December 1964 vide Page 11/c.f. the Chief Engineer, I.P. had asked this office if the note on the back water calculations and silt sedimentation surveys be given to the Chief Engineer, Irrigation Branch, Tungabhadra Board for his ~~opin~~ information. Kindly see Paras 15, 16 of the note file ~~wherein~~ wherein, it has been ordered that the reports may be got from the M.E.R.S. so that, Govt. may examine the same from inter-state angle.

113) According to the back water effect calculations done by the Mysore Engineering Research Station, it is seen that for a discharge of 3½ ~~and~~ lakhs Cusecs in the river at Tungabhadra Dam, the water level has been worked out as about 1653. This when compared to with F.R.L. and M.W.L. ~~at~~ 1633 provided for in Tungabhadra Reservoir looks a little abnormal. The calculations and the note would mean

that there will be ~~submergence~~ fore shore on the ~~fore~~ shore of the Reservoir upto 1653 i.e., about 20 feet higher than the maximum water level in the Reservoir. At present lands in the ~~fore~~ fore shore have been acquired upto about 5 feet higher than the M.W.L. and according to the present report ~~the distance it does~~ land lying in further 15 feet has to be acquired.

114) The Chief Engr. Investigation has not given any comment on this aspect of the note. In my opinion, since these levels have been worked out by taking into account the water surface as existing with the Dam existing the calculations which are generally applicable for back water calculations may not be quite correct in the present case. This aspect needs examination and comment by the Director, M.E.R.S. The Chief Engr. Investigation may be asked to examine the reports of the Director of M.E.R.S. on the lines indicated in the above Paragraphs and furnish his comments.

115

116

7/7/66

117) The figures of submergence at upper end of back water are alarming if the case is correct; at least in the latter case it has not been so far

169) 160) The letter of the C.E.(I) South at page 112/cf is for kind perusal. with reference to our letter dated 18-10-66 at page 90/cf. He has furnished his remarks on the Silt and Sedimentation of Tungabhadra Reservoir from the report of the Director, M.E.R.S. K.R.Sagar on the Tungabhadra Reservoir. The report as received from the Director, M.E.R.S, was sent to C.E.(I) South in this regard This reference has not been received with his remarks. It may be called from the C.E.

169) 161) From the remarks furnished by the C.E. it appears he has offered his remarks only to the extent of points mentioned in Govt. letter dated 14-10-66 at page 90/cf.. What is his impression of the report in not clear. Besides this, the reply is particularly silent with regard to his line of thinking for counteracting the adverse effects

of the sedimentation and Surveys regarding [illegible] waters effects on the dam.

Pr 293 4.5 10.9.68

(162) Kindly see Paras 108 to ~~117~~ 117 and the comments and recommendations received from the Chief Engineer with regards to the same at Page 112 to 114/c.f. The points made out by the Chief Engineer~~are~~.

(1) The rate of silting as worked out by the M.E.R.S. may perhaps be erroneous in as much as the contour interval taken for study and the original bed level of the Reservoir assumed for the purposes of calculation or perhaps ~~to~~ incorrect ~~erroneous~~. Therefore, he has expressed his doubts regarding the correctness of the rate of silting in the Tungabhadra Reservoir and has suggested the conducting of such sedimentation surveys at an interval of 3 to 5 years and for another 10 to 15 years to assess the actual of silting. Further, he has also pointed out that the rate of silting may not be my acute due to the phenomena of the silt being drawn out by the sluices in the Reservoir. He has further suggested that a comprehensive programme for soil conservation in the catchment of the Tungabhadra Reservoir may have to be thought out to improve the erosion of soil into the Reservoir. This problem is not only for the Tungabhadra Reservoir. Accumulation of silt in the Reservoirs is perhaps common to all Reservoirs and therefore comprehensive Schemes for soil conservation in the catchment area of all of our Major Reservoirs will have to be thought out. It would be desirable if the State Technical Committee on soil conservation and Flood Control is requested to go ~~through~~ into this problem and draw out a Scheme for phased soil conservation measures in the catchment area of Tungabhadra

WD 01050—GPB—8,00,000 13-12-65

(20) As regards the back water effected of the Reservoir studied by the M.E.R.S., it has been indicated by the Chief Engineer that the levels are not truly representative and the observed levels are mostly at narrow points where there is bound to be afflux. The Chief Engineer has opined that the back water level may perhaps ~~be~~ very from 5 feet near the Dam to 20 feet at the farthest corner, and has suggested therefore that the study at the back water effects should be carried out for a further period of 4 to 5 years so as to arrive at a correct picture of the maximum water level reached on the fore-shore of the Reservoir. According to the Chief Engineer, the occurrence of such high floods is rare and that the duration is short, and therefore there may be no necessity to acquire the land up to the afflux level on the foreshore. Whenever any damage occurs to the crops or land we may have to pay compensation for the same. In other words, we may acquire lands according to the Chief Engineer up to the normal level to which waters spreads over on the foreshore in the Reservoir when the lake is still and this level will certainly have to be observed actually on the ground.

(21) ~~The Chief Engineer~~ and The Secretary, Tungabhadra - Board has been reminding Govt. for furnishing him a copy of the silted and sedementation survey report carried out in the Tungabhadra Reservoir. There may perhaps be no objection to furnish to the Tungabhadra Board the report on the rate of silting in the Reservoir as observed by the Director, M.E.R.S. at Pages 73 and 74/c.f. with the remarks that thes studies will have to be continued for a few more years, so that a correct truly representative picture may be got.

Dated.. 4.....5..1965.

SECRETARY TO GOVERNMENT
No. PD 615
6 MAY 1965

D.O. Letter No. 3484/B1/65-1.

Dear Shri Chandappa Patel,

Sub:- Depletion of the Tungabhadra Reservoir --Problem of silt in the reservoir-- Remedial measures--Regarding.

The Research Officer, Krishnaraj Sagar Engineering Research Institute has been entrusted by the Government o Mysore with conducting silt survey in the Tungabhadra Rese He is already on the job. It is expected that he will be submitting his report to the Government during this year.

2. The Governments of Andhra Pradesh and Mysore agree to release 40 to 41 T.M.C.ft of water from the Tungabhadr Reservoir for growing second crop in the Krishna Delta. The Tungabhadra Board released 40.84 T.M.C.ft of water fo this purpose. It is expected that on account of this draw of water, the reservoir level will be touching 1588 in th first week of June 1965. This will be the first time tha the Tungabhadra Reservoir will be touching this level sin water was impounded in the year 1953.

3. Mettur Reservoir was similarly lowered in the year 1963 in connection with the construction works relating t the Mettur tunnel scheme. The Government of Madras deput the Research Officer, Poondi Research Institute, to take silt survey in the Mettur Reservoir. This news item was published in Hindu dated 17-5-1963. I then requested the Government of Madras to favour me with a copy of the repo of the silt survey conducted by the Poondi Research Insti The Government of Madras were kind enough to send a copy of the report to the Board. It is seen from the report t

the life of the Mettur Reservoir has been estimate as about 1200 years.

4. As the Tungabhadra Reservoir will be touching 1588 this year, I do not know whether it would be possibl for you to depute the Research Officer, Krishnaraj Sagar to Tungabhadra Dam for a period of one month so that he could prepare similar report which will enable us to determine the life of the Tungabhadra Reservoir. I discussed this subject with you in your chambers on the 22nd April 1965 and you told me that you would have no objection to sending the Research Officer, Krishnaraj Sagar to Tungabhadra Dam for this purpose.

With Kind Regards,

Yours sincerely,

(G.N.Pathak)

-- -- --

I am directed to invite a reference to item 15 o upplemental Agenda for the Second Meeting (1961-62) an ution No.31 of the Minutes of the Proceedings of that eeting.

2. The echo depth sounder was temporarily lent to t esearch Officer, Mysore Engineering Research Station, aja Sagar in the year 1961 for purposes of conducting urvey of the Tungabhadra reservoir. It was also decid he Tungabhadra Board that no hire charges need be reco rom the Mysore Engineering Research Station as the Tun oard had interest in the Tungabhadra reservoir and it w etting the report of the silt survey from the Mysore En esearch Station. The equipment has not yet been return o the Board.

3. The subject was again considered by the Board at ourth Meeting (1964-65) and the Board decided that furt tion in the matter may be taken only after the report ith silt survey conducted in the Tungabhadra reservoir rsore Engineering Research Station is received by it. oard has also decided that a request may be made to the nt of Mysore to intimate to the Board whether they wou ke to purchase the echo-depth sounder. The Government

Andhra Pradesh have stated that they are willing to purchase the echo-depth sounder in case the Government of Mysore do not want to purchase it.

4. I am to request you to intimate to me whether the Government of Mysore would like to purchase the Echo-Depth Sounder lent to the Director, Krishnaraja Sagar Research Station for conducting silt surveys

Yours faithfully,

(G.N.Pathak)
Secretary,
Tungabhadra Board.

GOVERNMENT OF MYSORE

Office of the Chief Engineer,
Investigation of Projects,
Bangalore-9, dated 11-6-1965.

The Secretary to Government,
Public Works Department,
Vidhana Soudha,
Bangalore-1.

Sir,

Subject:- Laying down uniform procedure for conducting the silt survey in storage reservoir - Undertaking of silt survey work in Tungabhadra Reservoir by the Mysore Engineering Research Station, Krishnarajasagar - Regarding -

Reference: Your letter No.PWD 79 GKS 64 dated 4th June, 65.

With reference to the above, I write to state that the echo depth sounder taken on loan from the Tungabhadra Board will be useful in this zone and it is desirable to purchase this instrument.

I, therefore, request you to intimate the Secretary, Tungabhadra Board that the echo depth sounder which was lent to the Director, M.E.R.S., K.R.S., for conducting silt surveys in the Tungabhadra Reservoir may be transferred on a permanent basis.

Yours faithfully,

Chief Engineer,
Investigation of Projects.

2. This Board's letter No. 5240/B1/64 dated 14-7-1965.

-

I am directed to invite a reference to your letter cited first above and to state that the Chief Engineer, Irrigation Branch of the Board has intimated that the cost of the Echo-Depth sounding equipment is Rs. 19,687.52 (Rupees Nineteen thousand six hundred and eighty seven and paise fifty two only).

I am therefore, to request you kindly to intimate to me whether the Government of Mysore would like to purchase the Echo-depth sounder at the said cost so that necessary further action could be taken at this end.

Correspondence ending with letter No.CEI/MERS/EBS/1328 dt.12.11.65 from the C.E.(Invst.),Bangalore.

PREAMBLE.

The Secretary, T.B.Board in his ~~Order thereon. No.~~ letter dated 22.5.65 has reported that the Echo depths Sounder was temporarily lent to Research officer, M.E.R.S. ~~KxRx~~ K.R.Sagar, in the year 1961 for the conducting silt survey of purposes of the T.B.Reservoir. The instrument has not since been returned. The Secretary, Tungabhadra Board Reservoir, has further stated that as Board is agreeable has offered the same for sale. It is reported that the cost of the Echo—Depths sounding equipment is Rs19687-52.

The C.E.(Invstg.) who was consulted in the matter has reported that the Echo Depths sounder taken on loan from the T.B.Board will be useful in his zone and it is desirable to purchas

ls instrument at a cost of Rs.19,687-52

iii) Order No. PWD 79 GKS 64 dated 17-1-1966 of the Government of Mysore, Public Works and Electricity Department.

--:::--

The Tungabhadra Board has purchased an echo-depth Sounder for conduting silt survey in the Tungabhadra Reservoir. The Government of India have placed at the disposal of the Government of Mysore certain moneys for conducting silt survey in the Tungabhadra Reservoir as well as the Krishna Raja Sagar Reservoir. The echo-depth sounder purchased by the Tungabhadra Board was used by the Director, Mysore Engineering Research Station, Krishna Raja Sagar for conducting silt survey in the Tungabhadra Reservoir.

2. The Tungabhadra Board has decided at its Fourth Meeting (1964-65) that if the Government of Mysore want to purchase the echo-depth sounder, it could be sold to them. Accordingly a request was made to the Secretary to Government of Mysore, Public Works Department in the reference cited first to intimate to the Board whether the Government of Mysore would like to purchase the echo-depth sounder from the Tungabhadra Board. The Chief Engineer, Irrigation Branch has stated in his letter cited second that the cost of the Echo-depth

.2

Sounder is Rs. 19,687.52. The Government of Mysore, Public Works and Electricity Department have agreed to purchase the echo-depth sounder at a cost of Rs. 19,687.52 from the Tungabhadra Board in the reference cited third for the use by Mysore Engineering Research Station, Krishna Raja Sagar.

3. The Chairman, Tungabhadra Board has been pleased to direct that the echo-depth sounder may be released to the Government of Mysore, Public Works and Electricity Department at a cost of Rs. 19 [illegible] plus [illegible]tage charges leviable for such sales.

V. Venkata Rao

FOR CHIEF ENGINEER, PWD,
INVESTIGATION OF PROJECTS.

BRIEF NOTE ON THE SEDIMENTATION SURVEYS OF TUNGABHADRA RESERVOIR

INTRODUCTION

The Tungabhadra River with its name derived from two of major tributories namely Tunga and Bhadra is 480 miles in len upto its confluence with River Krishna at Sangameswaram in An Pradesh. A major reservoir has been built across this River near Mallapuram.

Sedimentation surveys were carried out under the Fundame nd Basic Research Programme sponsored by the Government of I levon reservoirs have been selected under this scheme and Tu s one them.

EQUIPMENTS

Apart from other equipments normally used for land surve s compass, level, theodolite etc. special equipments like mo aunch, two-way radio sets, sextants, echosounder equipments ere obtained and used.

SURVEYS

Important field operations involved in the surveys were:

1. Establishment of range stations
2. Triangulation surveys; and
3. Hydrographic surveys

A number of range points all along the shore line were f p and pillars of cement concrete blocks were constructed at oints. There are one hundred and thirty three main range po nd 38 subsidiary ones.

For triangulation surveys, a straight portion of the mai as selected as the base line measuring 5543.75 ft. One hund ifty seven triangles were surveyed. Shore survey was also c o establish vertical control on the range points and to run f cross sections for drawing contours. 285¼ miles of traver 29 miles of cross sections were covered.

The hydrographic surveys related to taking soundings in eservoir portion for determining the bed configuration. Thi

with sextants, mariner's compass and current meter. A tota length of 161 miles was covered by both the main and subsid range lines.

COMPUTATIONS

The soundings are reduced to the ground levels at the respective points on the bed of the reservoir. Contours at 10 ft. intervals are drawn. The capacity of the reservoir existing is computed. Compared with the original capacity it is seen that 4,10,500 acre-feet of silt has accumulated.

RESULTS OF THE STUDY

The loss in capacity of the reservoir due to siltation is 377.29 acre-feet per 100 sq.miles of water-shed area per on the average. Compared with the original capacity the tot loss so far is 13.49% over a period of ten years. The loss dead storage is 45.54% and in live storage 13.38%.

66 It is suggested that surveys be carried out once in thr years five years to study the pattern and the rate of siltat Further arrangements are being made to gauge the rate of sil charge in the Tungabhadra and its tributaries upstream and i the river downstream to correlate the extent of siltation wi inflow of sediment.

It may be mentioned in this connection that the figures of siltation per year in ac.ft.per year 100 sq.miles of catc in some of the reservoirs in India are:

1. Gobindasagar (Bhakra) - 160 (1959-to 1963)
2. Panchet Hill Reservoir (D.V.C.) - 330 (1958 to 1963
3. Maithon (D.V.C.) - 304 (1958 to 1963) and
4. Matatila (U.P.) - 107 (1962 to 1964) and
5. Mayurakshi (W.Bengal) - 463 (1954 to 1963).

Extract of Para 51 of "Report on the Tungabhadra Project, 1942, High Level Canal Scheme" By. Sri. M.S. Tirumalai Iyengar.

51. Silting in the Tungabhadra Reservoir:

It is not possible to estimate with any great accuracy the quantities of silt that will be deposited in the reservoir. There has not been any study of the silt conditions in the river for a long number of years. But from October 1939, samples of river silt are being analysed in the Siruguppa Farm Chemical Laboratory and these figures will be taken as affording some basis for calculating the life of the reservoir. Some data is better than nothing. Samples are taken at the following places which are situated above the dam site, (1) Valvapur anicut 12 miles above the dam site and (2) Hosa kota anicut about 4 miles above the dam site. Samples are taken also from the channels taking off above the anicuts but the total quantity drawn during the year through them ghaing very small are here neglected. At any rate these two anicuts will be submerged in the new reservoir and the silt percentage in the river above these anicuts will be applied to the total average flow in the river for the whole year. Thus the silt drawn off by th channels also will come into the computation automatical Samples were taken every fortnight and analysed.

The analysis made at the Siruguppa Farm Laboratory are shown in the statement V of Appendix 2.

The whole period of the river flow may be divided into two seasons - the flood and dry seasons.

The floods occur for four months generally July to October. In the reservoir these are the four months when it is likely to surplus. In the other eight months the river inflow will be passed down generally through the low level sluice in the dam. The average suspended matter contents for the two seasons are as foll ows:-

Season	Percentage by volume above Hosakata anicut		Percentage by volu above Valvapur an	
	Specific Gravity 2.	Specific Gravity 1.6	Specific Gravity 2.	Spec Gravi
July to Octr.	.0385	.0482	.0235	.029
NOvr.to June.	.0068	.0085	.0068	.008

Taking the highest values of the silt percentage above the two anicuts arrived at from the lower specific gravity, the percentage of suspended matter is .0482 from July to October and .0085 from November to June. The average total river flow in Tungabhadra is 336 thousand million cubic feet a year. Out of this it is quit on the safe side to assume 75 per cent as the flood flow from July to October. This 75 per cent fairly well tallie on a reference to the July to October flow for the past 3 years at Valvapur anicut- vide estatement IV of Appendix- Assuming that the suspended matter in the whole flow is deposited in the reservoir which however is the extreme improbable case the yearly deposit amounts to.

(482 x 252,000) cubic feet (Plus) (65x84,000) cubic feet = 121.5 (Plus) 7.1 = 128.6 million cubic feet.

(Continued on page....2)

The capacity of the reservoir upto the head sluice sill level of 1585 is 18,454 million cubic feet. It will take 144 years to silt up to the level of the sill of sluices. On this basis the life of the reservoir as a whole will be several hundred years - nearly 800 years. It must be remembered that no allowance has been made for the silt that is discharged when the reservoir is surplusing. Nearly 160 thousand million cubic feet will surplus every year. And about 60 thousand million cubic feet will be passed down through the low level sluices in the dam. An appreciable percentage of silt will thus be passed down. It may be as much as about 25 per cent or even more. Certain percentage of silt will also be floating in the reservoir all the time. No allowance has been made for all these. If all these are taken into consideration, the life of the reservoir beyond doubt, will be for over a thousand years. The Tungabhadra river is not one that brings down enormous sand and silt in the upper portions of its course. A large part of the catchment of the Tungabhadra above the dam site is generally one with a lot of vegetation and forest growth. There is not much of soil erosion under the circumstances, to warr-

dated 23-6-1966.

I am directed to invite reference to t
letter cited above and to state that a stu
of Silt and Sedimentation report of Tungabl
Reservoir by the Director, M.E.R.S., K.R.S.
reveals ~~that the lowest silt level in Tung~~
bhadra Reservoir is at 1550. The capacity
the reservoir upto this level is 53611 acr
feet. It is this capacity upto 1550 that
be termed as the dead storage available in
Tungabhadra Reservoir. It is seen from th
~~Director, M.E.R.S.~~ that the annual rate of si
in Tungabhadra Reservoir is 503.05 acre fe
and the silt already accumulated as on the
period when these surveys were conducted i
4,10,500 acre feet. ~~The note further~~
~~mentions~~ that about 45.54 per cent of the
storage and 13.38 per cent live storage ha
already silted up. ~~The details as to how~~
~~these percentages have been arrived at are~~
~~mentioned in the note. Further it can be~~
~~that~~ if 45.54 per cent of the dead storage
already silted up in this brief period of
about 10 to 15 years, the balance of dea
storage available can be expected to be si
in another 10 to 15 years. This is certai
a very dangerous situation frought with gr
consequences. It would mean that after th
dead storage is filled up the two canals n

It is not clear if this aspect ~~of the Direct M.E.R.S.~~ has been examined by you. ~~since the calculations as to how the figures mentioned note have been examined~~ arrived at are not g

~~Apart from this along with~~ the note on silt ~~sedimentation~~ Besides this the , a note regarding the effect waters in different reaches of Tungabhadra R has ~~also been~~ also been given by the Director, M.E.R.S reveals that for a discharge of 3½ lakhs Cus the river at Tungabhadra Dam, the water level been ~~worked out~~ estimated as about 1653, This when co ~~to~~ with F.R.L. and M.W.L. ~~at~~ of 1633 provided f Tungabhadra Reservoir looks a little abnorma calculations and the ~~notw~~ would would mean that th will be submergence on the fore shore of the voir upto 1653 i.e., about 20 feet higher th maximum water level in the Reservoir. At pr lands in the fore shore have been acquired u about 5 feet higher than the M.W.L. and acco to the present report land lying in further has ~~also~~ also to be acquired

I am therefore to request you kindly t examine ~~this~~ all these aspects ~~of the note also~~ and ~~and~~ a report to Govt with your comments as early possible. The details of the calculations e the percentage of silt accumulation may kindly be obtained from the Director, M. and furnished along with your reply.

GOVERNMENT OF MYSORE

No. PWD 79 GKS 64

MYSORE GOVERNMENT SECRETARIAT,
VIDHANA SOUDHA,

Dated, Bangalore, ...10-8-. 1966.

FROM

The *Secretary to the Government of Mysore,*
Public Works Department, Bangalore

To

The Chief Engineer,
(Investigation),
Bangalore.

Subject: Silt and Sedimentation Survey of Tungabhadra Reservoir.

2) A note on the effect of back water in different reaches of Tungabhadra Reservoi

Ref: Your letter No.CEI/TA.2/SST, dated 23.6.66.

-:o:-

I am directed to invite reference to the letter cited above and to state that a study of Silt and ~~to state that a study~~ sedimentation report of Tungabhadra Reservoir by the Director, Mysore Engineering Research Station, K.R.Sagar reveals that the annual rate of silting in Tungabhadra Reservoir is 503.06 acre feet and the silt already accumulated as on the period when the surveys were conducted is 4,10,500 acre feet. It is also seen that about 45.54 per cent of the dead storag and 13.38 percent of live storage has already silted u Therefore if 45.54 per cent of the dead storage has already silted up in this brief period of about 10 to years, the balance of dead storage available can be ex pected to be silted in another 10 to 15 years. This i certainly a very dangerous situation ~~x~~ frought withgre consequences. It would mean that after the dead stora is filled up the two canals now functioning at the low levels of 1550 to 1560 will cease to function probabel much before the Ayacut is developed. It is not clear ~~of~~ this aspect has been examined by you.

Besides this the note regarding the effect of back waters in different reaches of Tungabhadra Reservoir as given by the Director, Mysore Engineering Research Station reveals that for a discharge of 3½ lakh Cusecs in the river at Tungabhadra Dam, the water leve has been estimated as about 1653, This when compared with F.R.L. and M.W.L. of 1633 provided for in Tungabh Reservoir looks a little abnormal. The calculations and the note would mean that there will be submergence on the fore shore of the Reservoir upto 1653 i.e., abo 20 feet higher than the maximum water level in the Reservoir. At present lands in the fore shore have been acquired upto about 5 feet higher than the M.W.L. and according to the present report land lying in further 15 feet has also to be acquired.

I am therefore to request you kindly to examine all these aspects and furnish a report to Government with your comments as early as pc The details of the calculations regarding the percentage of silt accumulation may kindly be obtained from the Director, Mysore Engineering Research Stateion and furnished along with your reply.

Yours faithfully,

No. CEI/MERS/EDS/
Encls

THE CHIEF ENGINEER, P.W.D.,
Investigation of Projects,
Ananda Rao Circle,
Bangalore-9.
Date....THE.....6.....AUGUST

The Secretary to the Government of Mysore,
Public Works and Electricity Department,
"Vidhana Soudha", Bangalore - 1.

MYSORE No. 225 8 AUG 1966 P.W.D. (REC.)

Sub: Machinery and equipment - Echo-Depth Sounding Equipment to Mysore Engineering Research Stati Krishnarajasagar.

Government were pleased to accord sanction for the purchase of the above equipment at a cost of Rs. 19,687.52 Government Order No. PWD 79 GKS 64 dated 17-1-1966. The Tu bhadra Board was pleased to release the said equipment to t Government of Mysore, Public Works and Electricity Departme at a cost of Rs. 19,687.52 plus centage charges leviable fo such sales vide their Memorandum No. 5356/B1/64 dated 10-3- (copy enclosed for reference).

It is reported by the Director, Mysore Engineering Station, Krishnarajasagar, that the Executive Engineer, Civ Tungabhadra Dam has raised a bill of cost as follows:-

Cost of equipment	--	Rs.	19,687=52
Storage charges	--	Rs.	2=20
Centage charges	--	Rs.	1,968=75
Sales Tax	--	Rs.	1,378=13
	Total cost:		23,036=60

The centages added by the Tungabhadra Board are the charges usually levied in such sale transactions and hence ble.

It may be necessary to point out here that the abov equipment is a foreign equipment with no indigenous equival and that if the present opportunity is lost, it will involv greatly increased cost in securing another and may even cau inexorable delay in procuring one. Further, the possession such equipment will be very useful for carrying out marine surveys.

Therefore, the extra charges involved are inevitabl may agreed to.

It is, therefore requested that orders of Government are caused to be issued early for the purchase of the above equipment at a cost of Rs. 23,037/= in modification the Government Order of 17th January 1966.

Yours faithfully,

6/8

CHIEF ENGINEER, P.W.D.,
IRRIGATION OF PROJECTS,
BANGALORE.

COPY OF MEMORANDUM NO. 5356/B1/64 dated 10th March 1966 from Secretary, Tungabhadra Board, to the Chief Engineer, Investigatic of Projects, Ananda Rao Circle, Bangalore-9.

Subject:- Silt Survey -- Conducting silt survey in the Tungabhadra Reservoir on a permanent basis - Regarding.

Reference:- This Board's letter No. 5356/B1/64-4 dated 22-5-1965 addressed to the Secretary to Gover ment of Mysore Public Works Department.

ii) Letter No. 74/65 CE/JE/7 dated & 6-8-1965 of Chief Engineer, Irrigation Branch.

iii) Order No. PWD 79 GKS 64 dated 17-1-1966 of the Government of Mysore, Public Works and Electricity Department.

The Tungabhadra Board has purchased an echo-depth Sounder for conducting silt survey in the Tungabhadra Reser The Government of India have placed at the disposal of the Government of Mysore certain moneys for conducting silt sur in the Tungabhadra Reservoir as well as the Krishna Raja Sa Reservoir. The echo-depth sounder purchased by the Tungabh Board was used by the Director, Mysore Engineering Researcl Station, Krishna Raja Sagar for conducting silt survey in t Tungabhadra Reservoir.

2. The Tungabhadra Board has decided at its Fourth Meeting (1964-65) that if the Government of Mysore want to chase the echo-depth sounder, it could be sold to them. Ac ingly a request was made to the Secretary to Government of Public Works Department in the reference cited first to int to the Board whether the Government of Mysore would like t purchase the echo-depth sounder from the Tungabhadra Board. Chief Engineer, Irrigation Branch has stated in his letter ~~xxxxx~~ second that the cost of the Echo-depth Sounder is Rs Rs. 19,687.52. The Government of Mysore, Public Works and Electricity Department have agreed to purchase the echo-de sounder at a cost of Rs. 19,687.52 from the Tungabhadra Boa in the reference cited third for the use by Mysore Enginee Research Station, Krishnarajasagar.

3. The Chairman, Tungabhadra Board has been pleased to direct that the echo-depth soundermay be ~~x~~ released to Government of Mysore, Public Works and Electricity Departm at a cost of Rs. 19,687=52 plus centage charges leviable f such sales.

OFFICE OF

THE CHIEF ENGINEER, P.W.D.,
Investigation of Projects,
Ananda Rao Circle,
Bangalore - 9.

No. CEI/TA2/SST/
Encls.

Date THE 9th AUGUST 1966.

To

The Secretary to the Government of Mysore,
Public Works and Electricity Department,
"Vidhana Soudha", Bangalore - 1.

Sir,

GOVT. OF MYSORE No. 2932 9 AUG 1966

Subp (1) Silt and Sedimentation Survey of Tungabhadra Reservoir.

(2) Note on back water effect in different reaches of Tungabhadra Reservoir.

Refp Government letter No. PWD 79 GKS 64 dated 10-8-1965.

The Director, Mysore Engineering Research Station, Krishnarajasagar, was entrusted with the work of carrying out a survey of silt and sedimentation and working out the back-water effect in the Tungabhadra Reservoir, and reporting the findings. This has been complied with vide reports forwarded under this office No. CEI/TA2/SST dated 23-6-1966. It may be noted from the report on silt and sedimentation under " Results of the Study" siltation figures in other reservoirs have also been furnished for comparison. It is now upto the Chief Engineer in-charge of the Tungabhadra Reservoir viz., the Chief Engineer, Irrigation Projects or the Tungabhadra Board as the case may be, to study the findings and take necessary measures. This study was actually taken up at the instance of the latter please vide Government letter No. PWD. 79 GKS 64 —Datedp 17th May 1965, addressed to the Director, Mysore Engineering Research Station, Krishnarajasagar.

Further, the Chief Engineer concerned may be directed to obtain any further information required from the Director, Mysore Engineering Research Station.

Yours faithfully,

9/8

CHIEF ENGINEER, P.W.D.,
INVESTIGATION OF PROJECTS.

I am directed to forward herewith a brief report on the silt and sedimentation survey, of Tungabhadra Reservoir, and a note on the effect of back waters in different reaches of Tungabhadra Reservoir as received from the C.E.(Investigation) in his letter No.CEI/TA2/SHT dated 23.6.66, and to state that a study of silt and sedimentatic report ~~in~~ of Tungabhadra Reservoir by the Director ~~M~~.E.R.S.—> K.R.Sagar, reveals that the annual rate of silting in Tungabhadra Reservoir is 503.05 acre fe and the silt already accumulated as on the period when these surveys were conducted is 4,10,500 ac feet. It is also seen that about 45.54 per cent of the dead storage and 13.38 per cent of live storage has already silted up. Therefore if 45.54 per cent of the dead storage has already silted up in this brief period of 10-15 years, the balance of dead storage available can be expected to be silted in another 10-15 years. This is certainly a very dangerous situation frought with great consequences. It would mean that after the dead storage is filled up the two canals now functioning at the low levels of 1550 and 1560 will cease to function probably much before the ayacut is developed. ~~It is not clear~~ This aspect has been examined carefully

Besides this the note regarding the effect of back waters in different reaches of Tungabhadra Reservoir as given by the Director, M.E.R.S., reveals that for a dischargo of 3½ lakhs cusecs in the river at Tungabhadra Dam the water level has been estimated as about 1653, This when compared with the F.R.L. and M.W.L. of 1633 provided for in the Tungabhadra Reservoir looks a little abnormal. The calculations and the note would mean that there will be submergence on the fore-shore of the reservoir upto 1653 i.e., about 20 ft. higher than the maximum water level in the reservoir. At present the lands in the fore-shores have been acquired upto about 5-ft. higher than the M.W.L. and according to the present report land lying in the further 15 ft. has also been acquired.

I am therefore to request you kindly to examine all these aspects and furnish a report to Govt. with your comments as early as possible. The details of the calculations reg: percentage of silt accommulation may kindly be obtained from the Director, M.E.R.S. and furnished along with your reply.

PWD 79 GKS 64.

14 Oct, 66

Public Works Department, Bangalore.

The Chief Engineer,
Irrigation Projects,
Bangalore.

Sir,

Sub:- Silt and Sedimentation Survey of Tungabhadra Reservoir.

2) A note on the effect of back water in differente reaches of Tungabhadra Reservoir.

I am directed to forward herewith a brief report on the silt and sedimentation survey, of Tungabhadra Reservoir, and a note on the effect of back waters in different reaches of Tungabhadra Reservoir as received from the Chief Engineer(Investigation) in his letter No.CEI/TA2/SHT dated 23-6-1966, and to state that a ~~study~~ study of silt and sedimentation report of Tungabhadra Reservoir by the Director, Mysore Engineering Research Station, K.R.Sagar, reveals that the annual rate of silting in Tungabhadra Reservoir is 503.05 acre feet and the silt already accumulated as on the period when these surveys were conducted is 4,10,500 acre feet. It is also seen that about 45.54 per cent of the dead storage and 13.38 per cent of live storage has already silted up. Therefore if 45.54 per cent of the dead storage has already silted up in this ~~behalf~~ brief period of 10-15 years, the balance of dead storage available can be expected to be silted in another 10-15 years. This is certainly a very dangerous situation frought with great consequences. It would mean that after the dead storage is filled up the two canals now functioning at the low levels of 1550 and 1560 will cease to function probably much before the ayacut is developed. This aspect has to be ~~carefully~~. examined carefully

Besides this the note regarding the effect of back waters in different reaches of Tungabhadra reservoir as given by the Director, Mysore Engineering Research Station, reveals that for a discharge of 3½ lakhs cusecs in the river at Tungabhadra Dam the water level has been estimated as about 1653. This when compared with the F.R.L. and M.W.L. of 1633 provided for in the Tungabhadra Reservoir looks a little abnormal. The calculations and the note would mean that there will be submergence on the fore-shore of the reservoir upto 1653 i.e., about 20 ft. higher than the maximum water level in the reservoir. At present the lands in the fore-shores have been acquired upto about 5-ft. higher than the M.W.L. and according to the present report land lying in the further 15ft has also been acquired.

I am therefore to request you kindly to examine all these aspects and furnish a report to Government with your comments as

early as possible. The details of the calculations regarding percentage of silt accumulation may kindly be obtained from the Director, Mysore Engineering Research Station and furnished along with your reply.

Yours faithfully,

PWD (GI. Irrgn).
No 1040 Date 12/3

I. SECTION
P. W. & E. D.
No. 10631
Date 11 MAR 1968
Section 41

Sub:- Silt and Sedimentation Survey of Tungabhadra Reservoir.

Ref:- Government letter No. PWD 79 GKS 64 dated 14th October 1966 and subsequent reminders.

Referring to the above cited letter, I write to state as follows.

I. Silting of Tungabhadra Reservoir

1) The rate of silting in Tungabhadra Reservoir viz., 377.2 ft for 100 sq.miles of water spread area per year is far in e of what has been anticipated in the southern region. One of main reasons for this may be due to the excess quantity of si accumulation computed by taking the present sounding levels a original ground levels which may most probably have been base the contour maps furnished by the Survey of India some decade at the time of construction of the reservoir. The contour interval (10 ft) for the calculations purposes is also large therefore this might have resulted in giving somewhat high qu of silt as having been deposited.

2) The volume of 4,10,500 acre ft of computed silt deposite 10 years depends upon its unit weight which goes on increasin passage of years as new layers of silt get deposited on the o one and therefore the original volume of silt would get reduc in volume in say 5 to 10 years later.

3) It is also mentioned that 2 canals now functioning at th low levels of R.L. 1550 and R.L. 1560 will cease to function probably much before the ayacut is developed. This may not as the reservoir has many outlets including those at low leve and the studies of various reservoir operations throughout th world have indicated very low silting nearer to dam and furth the operation of these outlets will usually have the effect o scouring sluice by drawing the accumulated silt in a funnel s formed at least near the outlets without allowing them to get silted up.

Recommendations:

1) It is now suggested that the silt and sedimentation su should be continued at intervals of 3 to 5 years for another 15 years assuming the present levels based on soundings as th basis for the correct block level plan of the reservoir bed. subsequent surveys would give the correct quantity of silt de and thereby the actual rate of silting.

2) Arrangements should be made to gauge the rate of silt charge in Tungabhadra River and its distributaries upstream a also in the main river downstream to correlate the rate of si with the inflow of sediment.

3) Comprehensive phased soil conservation measures in the catchment area should be taken with utmost urgency to reduce

.. P/2

rate of silting in the reservoir. This would incidentally improve the climatic conditions as well as the rainfall in t area. The soil conservation methods would improve the soil fertility and thereby the agricultural production would incr

II. Back Water effect in Tungabhadra Project.

The Director, Mysore Engineering Research Station, in his report has furnished the back water effect of Tungabhadr Project based on the theoritical calculations for various discharges from 1.00 lakh cusecs to 3.5 lakh cusecs. Based the theoretical calculation, the water surface level near th dam site for discharge ranging from 1.00 lakh cusecs to 3.5 cusecs will correspond to R.L. 1619 to R.L. 1627.

Remarks:

1) In the theoretical calculations the co-efficient of ru is assumed as 0.035 and 0.030 in the two alternative studies conducted for discharges of 3.5 lakh cusecs and 3.00 lakh cu The basis on which the uniform co-efficient of rugocity (N) has been assumed as 0.03 is not indicated in the report. Ho ever, it is felt to be slightly on the higher side.

2) The observed high flood levels are at narrow points wh there is bound to be afflux and therefore this affluxed leve should not be taken as the actual high flood level for the reservoir at the cross section.

3) Government in their letter mentioned above have stated that for a discharge of 3.5 lakh cusecs in Tungabhadra river the maximum back water effect would be at R.L. 1653 with the M.W.L. of R.L. 1633 which would mean a submergence on the foreshore of the reservoir for about 20 ft higher than the M.W.L. in the reservoir and have therefore asked for the opinion about acquiring the land lying in the further 15 ft higher elevation, along the fore-shore. It may be mentione that the computed back water level based on the assumed valu of co-efficient of rugocity should not be taken as uniform over the whole area. The afflux is bound to vary from secti to section, and the actual afflux calculated for any section only should be adopted with intrapolation. Excessive afflux due to local configuration and constrictions should be provi for separately.

4) The frequency of occurance of such floods is rare and the duration is also short. Therefore even if such a flood occurs, the duration being short its adverse effects on the fore-shore are not large. However, it might become necessar to acquire the entire area to safeguard against the eventual of such back water effect on rare occassions, if there is extensive damage to crops etc.

5) The back water effect follows a particular curve and t fore the land if to be acquired should not be for the remain 15 ft for the entire water spread but will vary from the min of 5 ft at the masonry Dam to a maximum of 20 ft at the fart corner, as stated in para 3 supra.

Recommendations:

1) It is now suggested that the study on the back water effects for various discharges should be continued for anoth 4 to 5 years at sections more suitable and more representati than those now selected and should compare the back water le so observed with the computed figures for corresponding dis- charges.

2) In the event of submersion due to back water effect at high discharges ~~but~~ Govt may acquire land or pay compensation for the damage caused to the land or to the crop whenever it occurs.

Yours faithfully,

G.Narayan 8.3.68

DECCAN HERALD
Date 11-7-68

Silt deposit in TB reservoir causes worry

By Our Staff Reporter

The rate of silt deposition in the Tungabhadra Reservoir, Munirabad, is causing concern to the Government.

What is causing "disquiet" to the Government is that the rate of silt deposition continues to be heavy despite the fact that there are two major upstream silt traps in the shape of Lakkavalli Reservoir across the Tunga and the high weir across the Bhadra besides numerous minor tanks in that part of the catchment area having an assured rainfall.

The Government is at present conducting a survey to find out whether the silt flows out with the current or deposits. Future steps will be decided after the
